Make every second grow.

One drop. A world in motion. A reason to arrive.

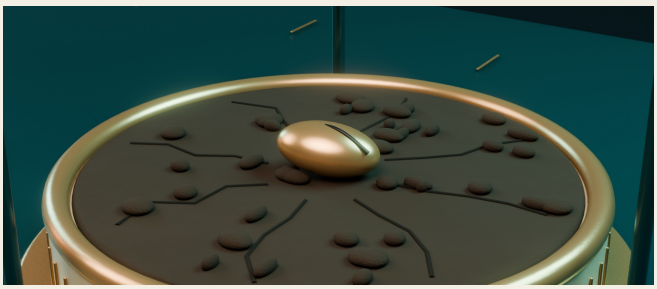

24 SECONDS / BLENDER / ORIGINAL PROCEDURAL FILM

A dry seed waits. A luminous amber drop accelerates through precision gates and a vertical loop. The machine finally gives way to stillness: a held drop, a fall, then an unfolding flower.

The interpretation of Speed is purposeful motion. The race matters because of what it makes possible. A restrained palette, physical lighting and a deliberate pause let the ending feel earned.

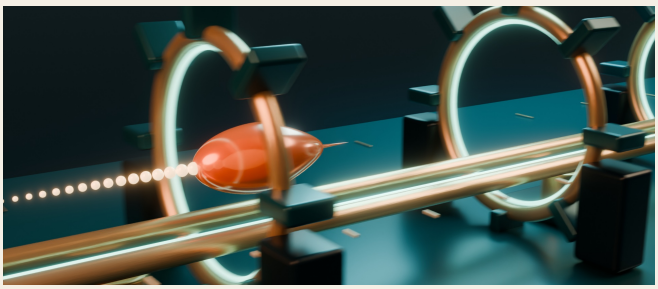

Entrant and project lead: Shivam Gupta
AI-assisted production: OpenAI Codex, with full workflow and asset disclosure included.

A race. A breath. A bloom.

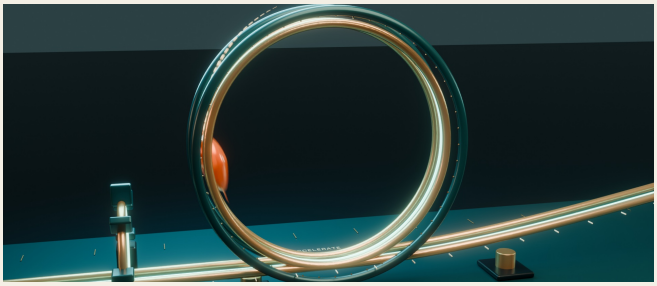

00:00-00:02

A seed establishes the need.

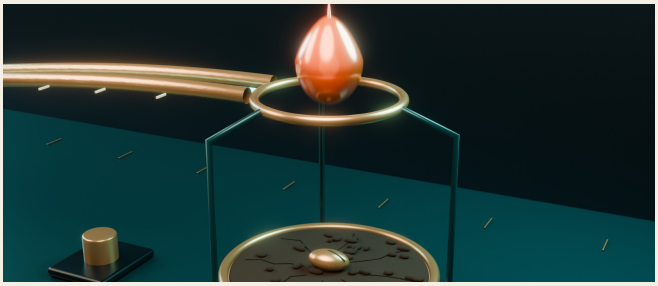

00:02-00:06

A following camera sells acceleration.

00:06-00:11

The route opens into a full loop.

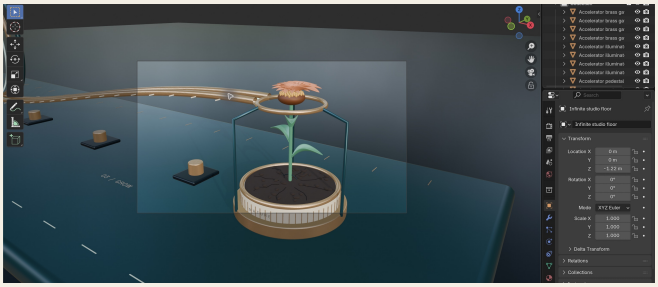

00:11-00:15.25

Braking, suspension and release.

00:15.25-00:24

Growth replaces the machine's urgency.

AUTHENTIC BLENDER WIP

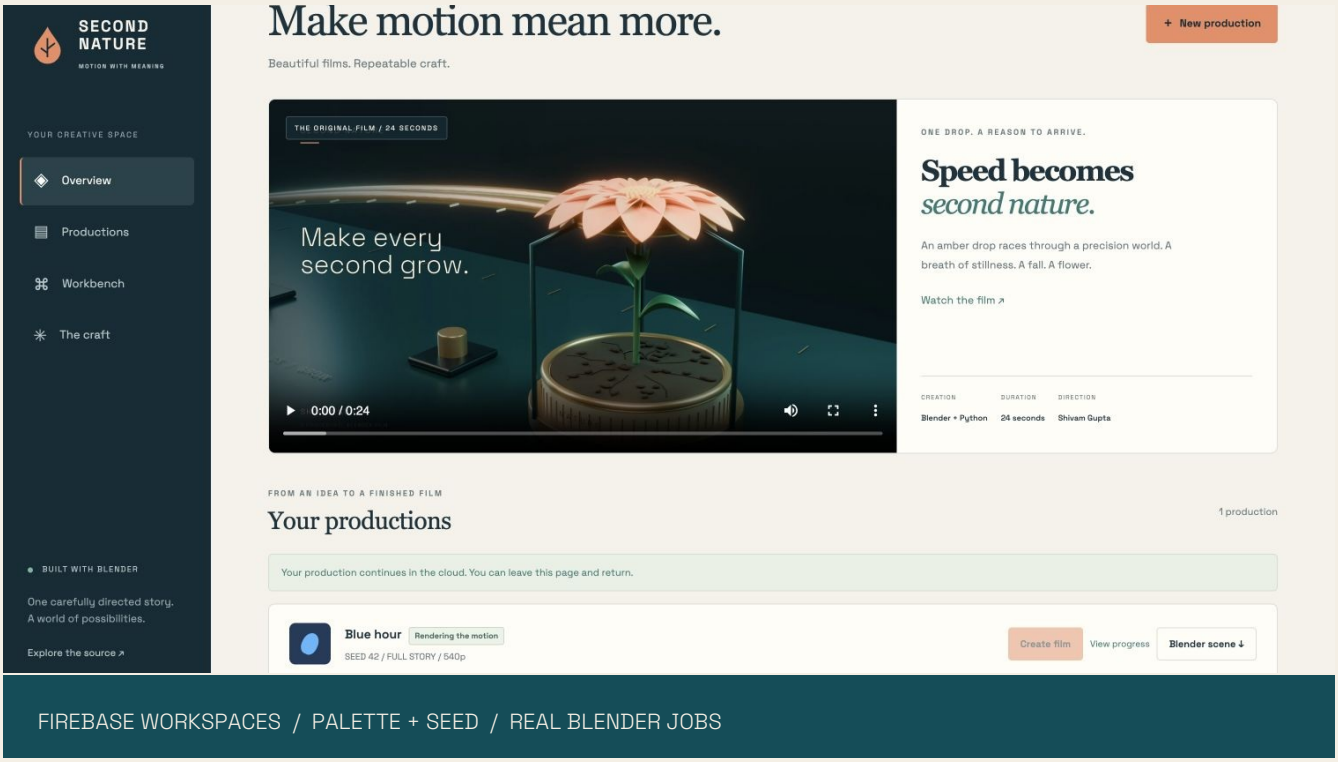

Editable geometry, rigs and baked keys.

Procedural control: bpy constructs the drop, rails, machined planter, soil, petals, leaves and Fibonacci pollen. Separate petal hinges unfold in staggered whorls. Five independent shot cameras avoid cut interpolation during motion blur.

Sound and image: original mathematical audio synthesis, Blender Cycles rendering, and pixel-precise title assembly. All motion is scripted and baked. No physics simulation, stock models, stock textures, recorded music or generative video is claimed.

One film, repeatable craft.

A hosted production studio for creators making polished variants of one approved visual direction.

FIREBASE WORKSPACES / PALETTE + SEED / REAL BLENDER JOBS

Customer: freelance motion designers and small studios producing launch films or sustainability campaigns. The hypothesis is that repeat variations and recovery from interruptions consume billable creative time.

Working today: guest and email workspaces, isolated productions, palette/seed controls, real Cloud Run jobs, saved frames, cancellation, recovery and private exports. The original film and complete local production source are included.

Commercial experiment: test a US$250 assisted variant service or US$79 editable-template license. These are proposed prices. There are no claimed customers, revenue or measured market demand.

What would earn a business: ten customer interviews, three paid pilots and measured revision/support time. The current code is not a moat; a distinctive film library and reliable delivery may become one.

Hosted studio: second-nature-studio.web.app. Cloud previews are 540p, with shared daily capacity and seven-day file retention. The local source supports final 1080p production. Pricing, alternatives and assumptions: docs/COMMERCIAL.md.

Ready to review and enter.

The film is complete in the delivery package. Official registration and the submission post are separate actions; this dossier does not claim a confirmed contest entry.

OFFICIAL SUBMISSION CUTOFF

1 NOVEMBER 2026 / 05:29 IST

01 Confirm eligibility

Age 18+, eligible location, one entry per person. Use your real name and account details.

02 Register through the official services

Create/sign in to a free RenderJuice account. Join the official Discord, then select Join contest in #start-here and complete its private form.

03 Post the actual entry

In #contest-submissions, post the public 24-second film link and attach stills/blender-wip.png. Use the Official Entry tag and the prepared description and disclosure in docs/ENTRY.md.

04 Check the receipt

Verify playback, attachments and public access. Save the post permalink. Devpost is an optional mirror and does not replace the Discord post.

Disclosure: OpenAI Codex assisted with concept, code, production automation, documentation and review. Geometry, materials and synthesized audio were generated for this project. Space Grotesk is licensed under SIL OFL 1.1. Tools: Blender, Python, FFmpeg, NumPy and Pillow. No RenderJuice cloud rendering or physical simulation is claimed.

Separate studio demonstration: an 80-second narrated product walkthrough uses a disclosed stock synthetic voice and readable captions. Script: docs/studio-demo-script.txt. The 24-second film itself needs no voiceover.
